

Getting Started with Glow Gravel & Pebbles

Before spreading your glow pebbles or gravel, we recommend you **test that it is going to be suitable** for you. Glow in the dark products can be outshone by other ambient lights even moonlight so here's an easy way to check that you'll get the effect you want *before* you open the packet.

Charge it up in daylight

Your glow product will have been delivered in a dark sealed parcel, so it won't have much charge when it arrives.

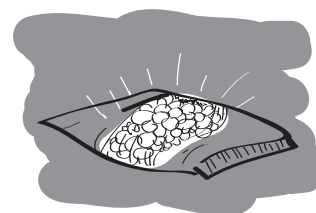

Leave the packet in direct sunlight, or under bright lighting, for a few hours to charge up.

Check out the glow

Take the packet into a room that is completely dark, or hide under a duvet with it, to see the glow effect in absolute darkness.

Your eyes will need a few seconds to adjust to the darkness before you will see the brightest glow.

Try it in place

Now that you know what to look for; move the packet to where you plan to use the gravel and turn off any nearby lights.

If this is outdoors, you should wait until it gets dark, of course.

Can you see the glow?

If you can't see the glow you want, then this product may not be suitable for you.

You can contact us up to 14 days after your glow gravel arrives to return it for a refund. We'll be happy to help.
